### Professional Experience

- 2019–2020 **Affiliate**, *Lawrence Berkeley National Laboratory*, USA (CA).  
I led investigation into flow classification on high-speed networks using state-of-the-art machine learning models and programmable network hardware. Work presented at IEEE GLOBECOM 2020.
- 2019 **Research Intern**, *ESnet, Lawrence Berkeley National Laboratory*, USA (CA), 3 months.  
I undertook the design, implementation, and testing of software written in Go for high-throughput stateful traffic analysis in the future design of a large-scale WAN. This included modification of programmable switch firmware, deep analysis of the network stack, and close integration with operations staff. Presented at IMC 2019.
- 2016 **Research Intern**, *University of Glasgow*, Scotland, 2 months.  
Problem model design, implementation and optimisation in Constraint and Integer Programming paradigms (Choco3 and Gurobi solvers), working with Prof. David Manlove and Dr. Patrick Prosser.

## Open-source Contributions

- since 2020 **Songbird**, *Rust*.  
Standalone VOIP driver for Discord. I am responsible for its architecture, initial implementation, and maintenance. This work spawned the stream-catcher minimal-locking bytestream cache.
- since 2018 **Serenity**, *Rust*.  
Discord bot client. I primarily maintained the voice system.
- Misc.**  
I have contributed bug fixes and improvements to the Rust compiler, Open vSwitch, twilight-rs, and amethyst-rs.
